Profile	Passionate software engineer with more than 13 years of professional experience. Competent in low-level system development, high-level user-facing applications, and full-stack development. Open-source contributor and maintainer. Occasional hobby game developer.
Recent Experience	Director of Technology, Mighty Digital – 2017-Present I manage a product and engineering team for multiple clients and client team communications. I also oversee my team on projects such as low-level system development up to high-level consumer-facing application development. Founder, Nexrender – 2016-Present I created a system for templated on-demand video rendering. It features network asset delivery, video/audio encoding management, and scalable cloud AWS infrastructure. I'm responsible for full system architecture, development, and team/company management. (semi open source project, 1600+ stars on github) Data Architect / Consultant, Uproad by Kapsch, Contract – 2019-2023 I designed analytics and compliance data warehouse architecture for Finance, Operations, Growth, Marketing, and Security/Compliance Teams. Coordinated the data engineering team and architected data pipelines, schema design, and storage. Full Stack Engineer, Bridgestone – 2016-2018 Creating and managing various data flows within the ecosystem, ETL processing, front-end engineering for the embeddable React-based widget, and backend API development.
Open-source	librg – 2017-Present Single-header cross-platform world replication in pure C99 that serves as a middleware between data-transferring libraries and core application/game logic. (1200+ stars) zpl – 2017-Present Single-header cross-platform low-level library. Developed and supported for i386, amd64, ARM/Arm64 architectures and on Windows, UNIX, iOS, Emscripten, Android systems. (900+ stars)
Education	Taras Shevchenko National University of Kyiv – Bachelor in Software Engineering, 2016
Skills	Languages: Ukrainian (native), English (fluent) Programming: C, C++, JavaScript, C#, PHP, Java, Lua, Go, x86 ASM General: Solution design and architecture, Project Management, Technical Leadership, Data & Analytics, ETL Systems, Video automation, Web, Mobile, and Desktop development. Technologies: Web (Node.js, React, Next.js, Electron), AWS (S3, EMR, EC2, Lambda, Redshift, DynamoDB, RDS), GCP (BigQuery, GCF, GCS), Desktop (SIMD, Memory allocation strategies, UDP/TCP, WinAPI, Posix API, ZeroMQ, nanomsg, msgpack), Terraform;
